Slow Dough Pizza Co. — Content Manager Guide

UPDATING THE MENU, BLOG & DOUGH ANNOUNCEMENT YOURSELF

For the owner / manager
Version 1.0 · about 5 minutes

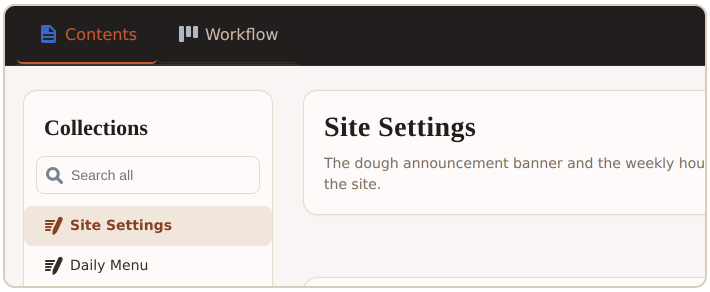

Where: open **your-site/admin** (or click the small “Staff” link at the very bottom of the website). Sign in with the GitHub account that was invited to the Slow Dough repository.

1 Sign in

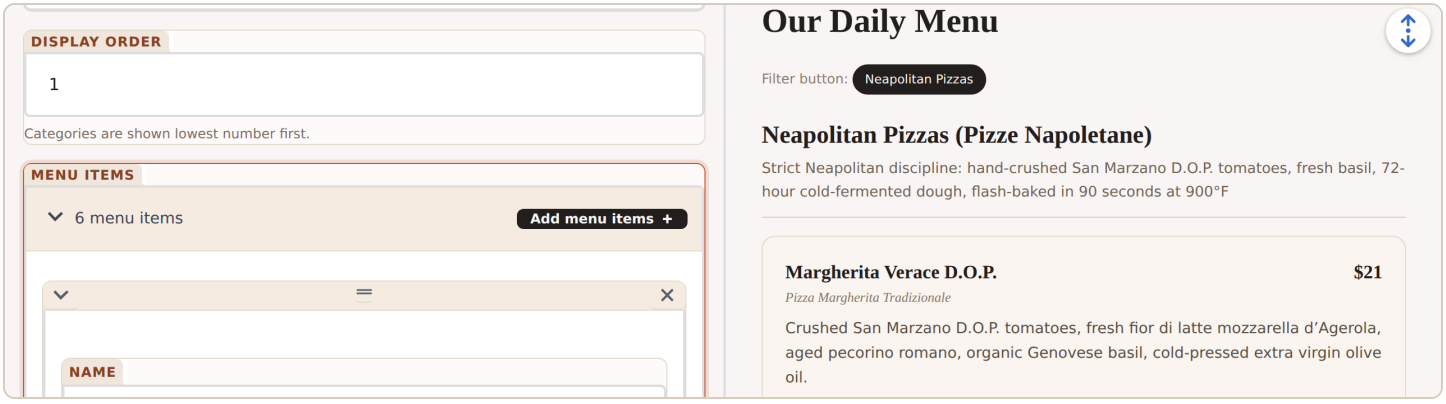

Click **Login with GitHub**; a small window opens — approve it once. If it says “not a collaborator with write access”, ask the site owner to invite your GitHub account.

2 Pick what to change

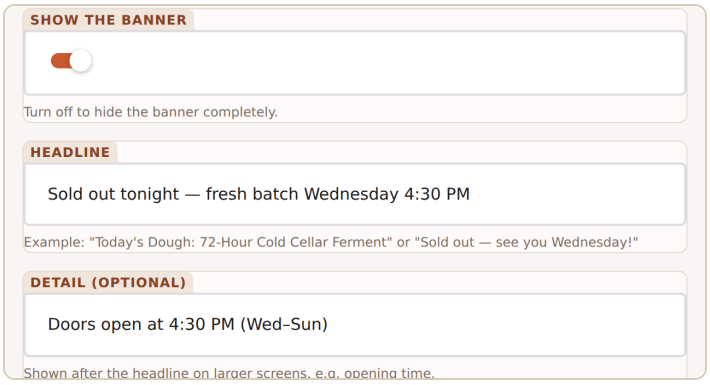

Site Settings = Dough Announcement + Hours & Schedule · **Daily Menu** = one entry per category · **Blog Posts**. Click an entry to edit, or *New …* to add one.

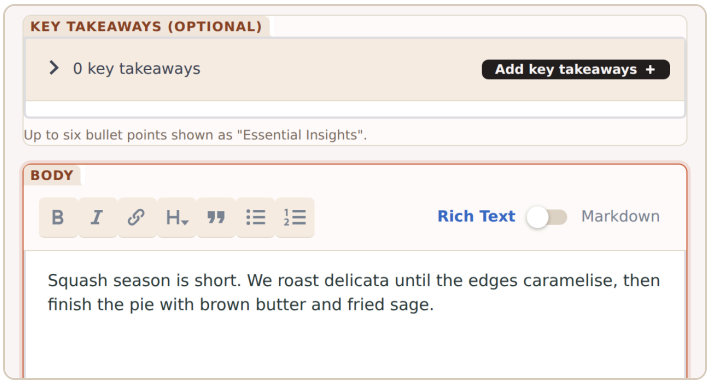

3 Edit — the right-hand side is a live preview in the site’s own look

Daily Menu: change a price, text or tags. Switch **Available today** off to show “Sold Out Today” without deleting the dish. *Add menu items* adds a dish, × removes it, the ≡ handle reorders. Tags “Vegetarian” / “Vegan” get the green leaf.

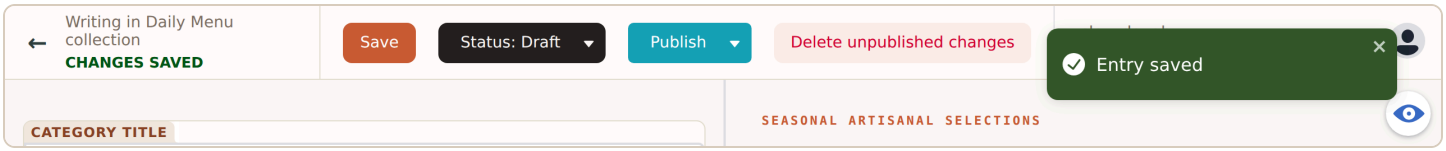

Dough Announcement — the dark strip at the top of every page: headline, detail text, on/off switch, and an *Alert* style for sold-out nights or closures.

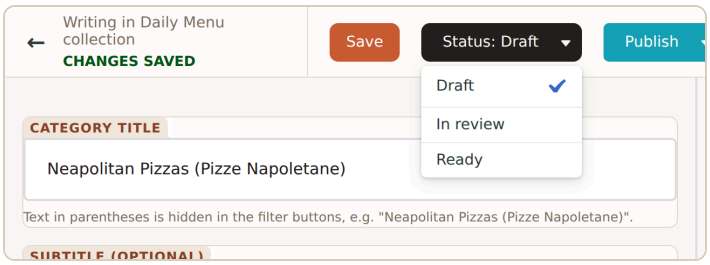

Blog Posts → New Blog Post: title, author, publish date, excerpt (shown on the card), key takeaways, and the essay in *Body*. Use the toolbar for headings, bold/italic, quotes, lists, links. Newest first.

4 Save — nothing is live yet

Click **Save**. The change is stored as a **Draft** that only you and the reviewer can see. Keep editing and saving as often as you like.

5 Send it for review

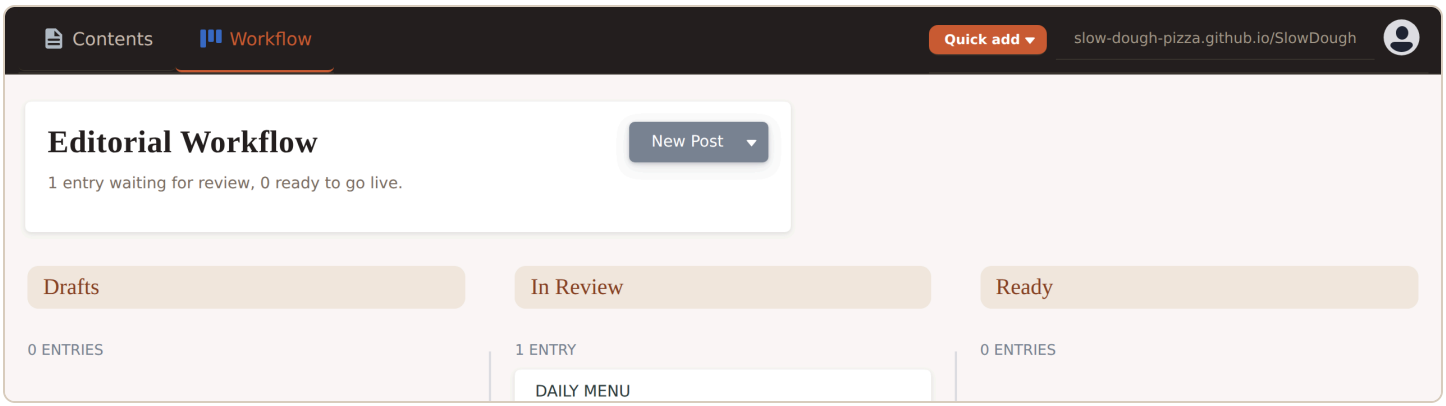

Open **Status** and choose **In review**, or **Ready** when it is final. The reviewer is notified.

6 If something is refused

Plain text only. A red message under a field means the text contains something that looks like web code (e.g. `<b>`, `<script>`) or is too long. Remove it and save again — nothing is lost.

7 Review & go live

The **Workflow** tab lists every pending change. Behind the scenes each one is a GitHub *pull request* on its own branch — never directly on the live site. A reviewer approves and merges it on GitHub; the website then rebuilds itself and the change is live in **about 2 minutes**. If you are also the reviewer, open the entry and click *Publish → Publish now* once it has been approved.

Good to know

STATUS	MEANING
Draft	Saved, visible only in the admin. Keep editing freely.
In review	Waiting for the reviewer to approve.
Ready	Approved / final — about to be published.
Published	Merged; the site rebuilds and goes live in ~2 min.

- **Changed your mind?** Open the entry from Workflow and click *Delete unpublished entry*.
- **Something live is wrong?** Edit the entry again and save — the fix goes through the same quick review.
- **Not seeing it?** Wait 2 minutes, then refresh the website (Ctrl/Cmd + Shift + R).
- **Prices** are numbers only, e.g. `19` or `19.5`. **Dates** use the calendar picker.
- **Can't sign in?** Your GitHub account needs *Write* access to the site repository — ask the site owner.
